PULSEPOINT RESPOND

PulsePoint Respond is a 911-connected mobile app that alerts CPR/AED-trained individuals to someone nearby having a sudden cardiac arrest.

PulsePoint Respond supports multiple responder types, including community members, healthcare professionals, and public safety personnel. Specialized app capabilities are available for professional, on-duty use.

- PulsePoint aims to initiate CPR earlier and more often as well as increase the use of automated external defibrillators (AED), prior to emergency responders arriving on scene.
- PulsePoint is integrated directly into the public safety communications center. When a call taker determines CPR may be needed, an alert is sent to nearby app subscribers simultaneously with the dispatch of emergency responders.
- To promote daily app usefulness and encourage program participation, community users are shown select emergencies occurring in the community and offered notifications of public interest events such as traffic collisions and wildland fires.
- According to the latest AHA guidelines, emergency dispatch systems should alert willing bystanders to nearby events that may require CPR or AED use through mobile phone technology.

PUBLIC INTEREST ALERTS

Improving situational awareness with PulsePoint can help build safer, stronger, and more resilient communities.

RISK AWARENESS

Public interest alerts allow community members to stay mindful of important incident activity that may be impactful. These informational notifications provide an early and automatic heads-up to local threats such as wildland fires, flooding and utility emergencies. Making the public aware of risks and helping them be prepared is an essential component of community risk reduction.

DAILY USEFULNESS IS KEY TO ENGAGEMENT

Users share the daily usefulness of PulsePoint with neighbors, family, and friends, and in turn, they help build and sustain a dynamic and reliable network of CPR-trained individuals.
